

Windows

Measuring Your Windows

Step one: Count total window openings that you want replaced.

Step two: Determine your window layout.

Step three: Determine the window type for each opening.

Step three: Measure the window openings. Start at the front door and move clockwise around your home and measure the opening's width and height in inches. Add the measurements together to get the total united inches. If you wish to have more than one window in each opening you will need to divide the window opening into the desired layout configuration and then add the width and height of each window together to get the total united inches for each window.

Step Four: Determine the glass options desired for each opening.

Step five: choose your grid options.

Step Six: Choose frame color.

Step Seven: Choose screen type.
